

SMALL SCALE PROCESS EQUIPMENT

CUSHION CUTTER

AUTOMATICALLY CUTS AND SHAPES A ROPE OF CANDY INTO TRADITIONAL CUSHION SHAPED PIECES, TYPICALLY KNOWN AS HUMBUGS.

Candy rope is pulled through the cushion cutter machine and cut into pillow shaped pieces typically known as humbugs. Once it has been cut, the candy rope is then left to cool and becomes brittle, making it easy to break up into individual candy cushion pieces.

The unit consists of an in-feed port, cutter and out-feed port, all manufactured in stainless steel for long life and maximum hygiene.

The unit is supplied with one set of cutters; with different cutters the unit can cut many different lengths of candies.

At the front of the machine is a clear hinged guard cover to the cutter section. This is fitted with a safety switch so the machine will automatically stop if the guard is open.

These machines are typically suited to small scale, low volume production. For example, recipe development, public demonstrations and low output manufacturers.

FEATURES

- Full stainless steel construction for maximum hygiene.
- Simple machine to operate and maintain.
- All contact parts are easy clean.
- Dimensions 350mm long x 260mm wide x 350mm high.

CUSHION CUTTER

SPECIFICATIONS

Overall Height
350mm

Overall Length
350mm

Overall Width
260mm

Material
Stainless Steel

Output
Up to 160kg per hour depending on candy size

Weight
50kg

Uses
To form candy cushions from a hard candy rope
