

## CANDY BATCH ROLLER – BR01

**FORM A CONFECTIONERY BATCH INTO A CONTINUOUS ROPE, SO IT CAN THEN EASILY BE WORKED INTO A FINAL PRODUCT.**

The Loynds BR01 Candy Batch Roller designed to shape a confectionery batch into a cone shape by means of an alternating rolling action created by the 4 internal rollers. This robust machine has a batch capacity of up to 70kg, complemented by integrated electric heating to maintain the confectionery mass at the ideal consistency for processing.

As a foundational piece of equipment in many confectionery production lines, the Batch Roller is pivotal in the manufacture of a diverse array of sweets. Its tapered rollers form the candy into a conical shape, which is then tapered down to create a rope. This is typically fed into a rope sizing machine. This candy rope is essential in the creation of various confectioneries such as rock candy, candy canes, die-formed candies, and others, depending on the subsequent machinery in the production sequence.

Typically the batch roller is supplied with a rope sizer and both are operated from one control panel. By request we can provide it as a separate unit with its own control panel.

The Batch Roller plays a crucial role in the artisanal creation of handmade candies.

### FEATURES

- Capacity: 70kg processing capacity.
- Flow control with powered lifting and lowering of the machine.
- Controllable electric heating to ensure malleability of candy batches.
- Bidirectional roller motion with electronic control.
- Left to right or right to left configurations available.
- Exit rope size adjustment.
