

Plastic, Paper and Wooden Lollipop Sticks

Paper Lollipop Sticks

We supply high quality rolled paper lollipop sticks; these are manufactured from virgin paper pulp. Paper lollipop sticks are biodegradable, which is preferable when environmental issues need to be considered. All of our paper lollipop sticks benefit from high tolerances, which ensures that they are equally suited for use in high speed lollipop production lines.

Hollow Plastic Sticks

Our hollow plastic lollipop sticks can be manufactured with either one or two gripping notches. Due to the high tolerances in both length and diameter they are highly suited for use in high speed fully automatic lollipop production lines.

We can supply hollow sticks in container loads at competitive global prices for high volume lollipop manufacturers.

Wooden lollipop Sticks

We supply wooden lollipop sticks in many different formats including rounds, flats and square sections. Our wooden sticks are sourced from sustainable sources of birch wood. Wooden sticks are often preferred in hand made products where pops may be heavier than those produced on mechanical production lines. We also stock different formats of wooden sticks including square section and flat for toffee apples and ice lollies.

Solid Plastic Sticks

Typically our solid sticks are used by low volume, artisan producers making lollipops by hand. They can be manufactured in any size, colour or quantity you require. Our hollow sticks are made from food grade polystyrene and have a smooth white finish. These sticks also have various uses including flag poles, cake dowels and model making.
